IronArch Technology
United States

Dear Hiring Manager,

I am writing to express my strong interest in the Level 2 Software Engineer – Full Stack Developer position at IronArch Technology. With a solid background in full stack development and extensive experience in creating integrated solutions across web, mobile, and automation platforms, I am confident in my ability to contribute to your innovative, people-first team.

Throughout my career, I have built robust RESTful APIs using frameworks such as Django, Flask, and FastAPI, and developed dynamic, responsive web applications with React and Next.js. I have also designed and implemented mobile applications with Flutter, integrating services like Firebase and payment gateways such as Stripe to deliver seamless user experiences. My technical expertise extends to modern DevOps practices, including containerization with Docker, orchestration with Kubernetes, and continuous integration/deployment (CI/CD) pipelines, ensuring stable and scalable production environments.

I thrive in environments where I can work autonomously and lead projects with minimal oversight. My proactive approach involves clarifying ambiguous requirements, enhancing system documentation, and implementing automated testing, all of which contribute to reducing operational friction and optimizing process efficiency. Moreover, I have a proven track record of effectively communicating technical concepts to stakeholders, which aligns well with IronArch Technology's values of People First, Servant Leadership, and Delivering Excellence.

I am excited about the opportunity to bring my diverse skill set, from full stack development to AI-driven automation, to IronArch Technology. I look forward to the possibility of discussing how my experience and passion for technology can help drive impactful solutions for your Federal Government clients.

Thank you for considering my application.

Sincerely,

Daniel Giroto
